

Accelerate the Modernization of System i Applications

System i Modernization Webcast Series

- Are you asked to support electronic ordering systems, billing systems or other electronic interfaces?
- Do you have trouble integrating or getting products to communicate consistently?
- Are users complaining about old green screen "5250" user interfaces?
- Are you struggling with how to move your existing business applications into a Services Oriented Architecture (SOA) to become more flexible and agile?
- Are you interested in enabling your existing staff of business developers to build new applications or modernize existing applications to leverage new technologies?

If you answered yes to any of these questions, please join us to learn more about our solutions via these Webcasts:

- Sep 04 Modernize, Manage, and Test on System i
- Sep 11 Leverage System i in your SOA
- Sep 18 Accelerating Application Modernization with EGL
- Sep 25 How to Create a Web Service on System i
- Oct 02 Creating Modern User Interfaces on System i
- Oct 09 How to fix "FTP" Security & Compliance Risks

IBM provides a complete end to end solution to help you **modernize existing applications, manage your software development activities** and conduct and manage **comprehensive system testing** in a cost effective manner for both traditional architectures and in Service Oriented Architectures.
